ASBESTOS MANAGEMENT PROGRAM

The St. James-Assiniboia School Division recognizes that asbestos may be identified as being present in a Division owned building and that often it is not feasible, necessary, or cost effective to remove it and may be better to manage the asbestos in-place. In order to do so requires that management develop a program whereby the essential resources, work procedures, and training are implemented so as to effect the control of all activities that may lead to the uncontrolled disturbance of asbestos.

Accordingly, the Division commissioned Pinchin Environmental Ltd. in cooperation with the Division's Safety and Health Committee to develop an Asbestos Management Program (AMP). The resulting document: Asbestos Management Program for Properties under the Control and Administration of St. James-Assiniboia School Division, Pinchin Project Number 25614.001 and any revisions undertaken, shall constitute the asbestos management program for the Division.
