The Middle Years (Gr. 6 -8) provides a stimulating and supportive learning environment where high expectations, collaboration and continual learning are promoted. Early adolescents have unique emotional, social and developmental characteristics. Staffing, curricula and programming in middle schools are focused on meeting these needs. The programs in the Middle Years build on the programming in the Early Years.

Last Year's School Accomplishments (2017-2018)

Throughout the school year students were exposed to a variety of grade level texts and were able to demonstrate comprehension of these texts. Students also had the opportunity to compose their own writings from various points of view. Student worked through a variety of thinking strategies to help both their reading and writing skills.

Students were challenged in the area of problem solving and mental math. Various math strategies were used to teach a variety of concepts, with the help from divisional coaches to further increase student engagement.

Time was spent over the course of the school year creating lists of essential skills that were necessary to begin to approach successful mastery of these goals. Ongoing work on the development of these essential skills will be completed over the course of the 2018-2019 school year and is reflected in our SMART goals. This will include implementing learning sprints with specific learning outcomes related to our SMART goals allowing student progress to be monitored. We will continue to develop formative and summative assessments, that target the particular needs of our students.

Our Mission Statement

George Waters Middle School is devoted to academic excellence, respect for individual rights and differences as well as to the development of individual strengths.

School Profile

Number of teachers: 24

Number of students: 320

- Practical Arts (Home Economics, Woodworking, Electronics)
- Spring Camps for all grades

Extra-curricular Activities

Large variety of activities and opportunities:

- A wide range of extra-curricular Athletics (Volleyball, Basketball, Track and Field, Cross Country, Flag

A Quick Snapshot of the Classroom

English Language Arts: Teachers at George Waters use a variety of interesting lessons to teach kids about the fundamentals of communication: reading, writing, speaking, representing, listening, and viewing. With a focus on literacy development, we give students the opportunity to read, write, and create in a collaborative setting. We believe in giving students choices in what they read as it increases engagement and learning. This leads to engaging class projects and assessments.

French: Teachers will be engaging students by creating lessons centered around themes and topics that are meaningful to the students. These themes will be used to promote conversation amongst students so they may utilize, practice and reinforce their French speaking and listening skills.

Mathematics: Our math department is currently developing a mental math program for grade 7's that is in line with the provincial assessment and will proceed with grade 6 and 8 once the first one is completed. Teachers will be exploring the problem-solving bank of questions collated by the division. These will be used to assist students to see a variety of types of problems, including many problems used in the 5 Practice professional development that many staff have participated in. Staff continue to collaborate to provide best practices in instruction and common assessments.

Science: Students continue to develop the skills and attitudes of the design process that lead to a broader understanding of technological problem solving. Students are going to use technology and scientific inquiry to address questions about the world when doing research projects. Students will do hands-on labs, experiments and activities as well as field trips to increase engagement.

Social Studies: Social Studies teachers teach students about the world and its people from a geographical and historical perspective. The focus is on developing student understanding of the interconnection between people and places at local, national, and international levels.

Physical Education: Students in physical education classes at George Waters are actively engaged in a wide range of activities designed to develop an appreciation for regular physical activity. Students are given opportunities to apply skills in a variety of team and individual pursuits. Time is also dedicated to working with our students to understand healthy relationships and healthy lifestyle practices.

Practical Arts: Students at George Waters are enjoying participating in the many Destination Imagination instant challenges. Teams will be entered in regional competitions to represent our school. They are also practicing their teamwork and creativity while building structures using common materials, creating catapults and building airplanes from foam.

Rugby/Football, Ultimate, Badminton and more) for all grades

- Pokemon Club
- And more...

Planning & Goal Setting

School goals are created using the Divisional Strategic Plan as the guideline (www.sjsd.net/planning). The goal setting process begins in early Spring and includes input from students, teachers, parents and the community. Goals are developed around the needs and direction of the various departments with student progress and achievement and our mission and vision statement as our focus. We at George Waters Middle School believe that our goals are a living document that can be seen in all of our classrooms and are belief statements that encompass our learning environment.

This Year's School Goals and Priorities (2018-2019)

Literacy

All teachers are language teachers. GWMS will agree on common assessment strategies, both formative and summative, to inform both teachers and students on the progress achieved.

Numeracy

GWMS will work towards improving student problem solving and mental math strategies. Teachers will use common benchmarks to assess student progress.

Skill Sets/Exemplars

Teachers will continue to collaborate and establish the skills sets and exemplar work that reflect each grade level's set of student expectations. Teachers will build on common assessments so that every teacher has an understanding of what the expected learning outcomes for their students and a greater understanding of the curriculum. Students will develop grade and subject specific portfolios to help inform teachers and their learning progression.

Teachers and students will need to be explicit and answer the following questions:

- Why are we learning?
- What are we learning?
- How do we know we are learning?

Ultimately, the goal will be precision in the use of our tools and process to create rigor
