

Experimental Type of Project

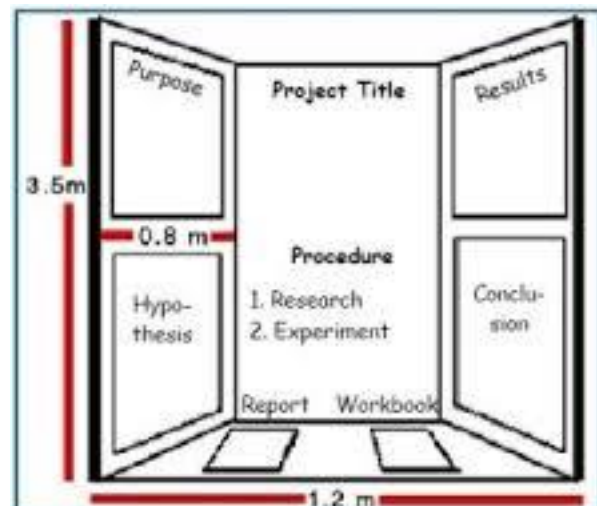

Parts of your Project

As part of your project, try to include the following parts:

- **Purpose** (or Question or Problem)
- **Hypothesis** (prediction)
- **Materials**
- **Procedure** (write out numbered steps on how you conducted your experiment)
- **Results or Observations** (could include written data, graphs, photographs, etc.)
- **Conclusion** (the conclusion should answer the question you set out to find out in your Purpose)
- **Application** (how does what you learned in your experiment connect to real-life?)

*Try to keep a dated log-book - keep track each time you work on your project. This could sit in front of your project.

Some examples of how you could set up your backboard: (but it is recommended to look online "science project backboard" for other great ideas...).

Project dimensions are 3.5 m high by 1.2 m wide by 0.8 m deep.
